APPLICATION FOR PERMIT UNDER
POLLUTION CONTROL ACT, 1967

LORNE MINING CORPORATION LTD., by this application, is applying for a permit pursuant to the *Pollution Control Act* to permit operation of a tailings-pond in the Highland Valley.

Lornex will be constructing a copper concentrator on its property and as a very necessary part of the process, a tailings-pond will be required to allow the crushed-rock waste to settle out of the water. The water, containing very small quantities of reagents, will be returned to the mill for reuse in the concentrator.

Fresh water will be pumped from Thompson River to act as make-up water to replace losses from evaporation and other causes. It is the intention, however, to retain and reuse all available water from the tailings-pond, keeping the make-up water to a minimum.

The tailings-pond will be located in Pukaist Creek valley and dams will be constructed to prevent any leakage downstream. The tailings-pond dams will be designed by well-qualified soils engineers to ensure that they will be constructed in a sound, stable, and safe manner.

Any seepage losses through the dam will be picked up by a small, lower dam and pumped back to the tailings-pond. In addition, wells will be drilled to intercept any loss into the groundwater and return it also to the tailings-pond.

Every precaution will be taken to ensure a safe operation that will not be a source of pollution, either downstream or to the surrounding area.

Lornex Mining Corporation Ltd., of 202, 580 Granville Street, Vancouver 2, British Columbia, hereby applies to the Director of Pollution Control for a permit to discharge effluent from a mine-mill operation located at Highland Valley, British Columbia, into an impoundment area where the tailings-water will be retained for reuse, and there will be no discharge into any stream, and gives notice of its application to all persons affected.

The point of discharge shall be located at tailings-dams at both ends of impoundment area, directly northwest of Indian Reserve 12.

The land upon which the effluent originates is District Lots 5702, 5703, 5706, 5712, 5718, 5695, Kamloops Division of Yale District.

The quantity of mill effluent to be discharged to the tailings-pond is as follows:

Maximum rate, 35 cubic feet per second, 13,000 imperial gallons per minute; maximum 12-hour discharge, 9,000,000 imperial gallons; average 24-hour discharge, 17,000,000 imperial gallons.

The operating season during which the effluent will be discharged is continuous.

The average characteristics of the effluent discharged to the tailings-pond shall be equivalent to or better than the following: Tailings will be 35–40 per cent solids of sand and fine rock particles at the rate of 45,000 tons per day. The balance will be water with small quantities of reagents in solution.

The type of treatment to be applied to the waste is as follows: Tailings will be retained in the pond where solids will settle out and water will be pumped back to the plant for reuse. There will be no positive discharge from the tailings impoundment.

I, George Sawada, Secretary-Treasurer, hereby certify that this application does not conflict with the local by-laws of Thompson-Nicola Regional District.

This application, dated on the 22nd day of May, 1970, was posted on the ground in accordance with the Pollution Control Regulations.
